## Preliminary Hydrology Report PEN22-0022 (LST22-0008)

- **Project Location**

- **Project Description**

- **Appendices**

**Appendix A:** Rational Method Hydrology Calculations – Undeveloped Condition

1. 10-year Storm Calculations
2. 100-year Storm Calculations

**Appendix B:** Rational Method Hydrology Calculations – Developed Condition

1. 10-year Storm Calculations
2. 100-year Storm Calculations

**Appendix C:** Unit Hydrograph Calculations - Undeveloped Condition

1.  $Q_{100}$  / 24 hr duration storm

**Appendix D:** Unit Hydrograph and Flood Hydrograph Routing Calculations Basin #1 - Developed Condition

1.  $Q_{100}$  / 24 hr duration storm

**Appendix E:** References

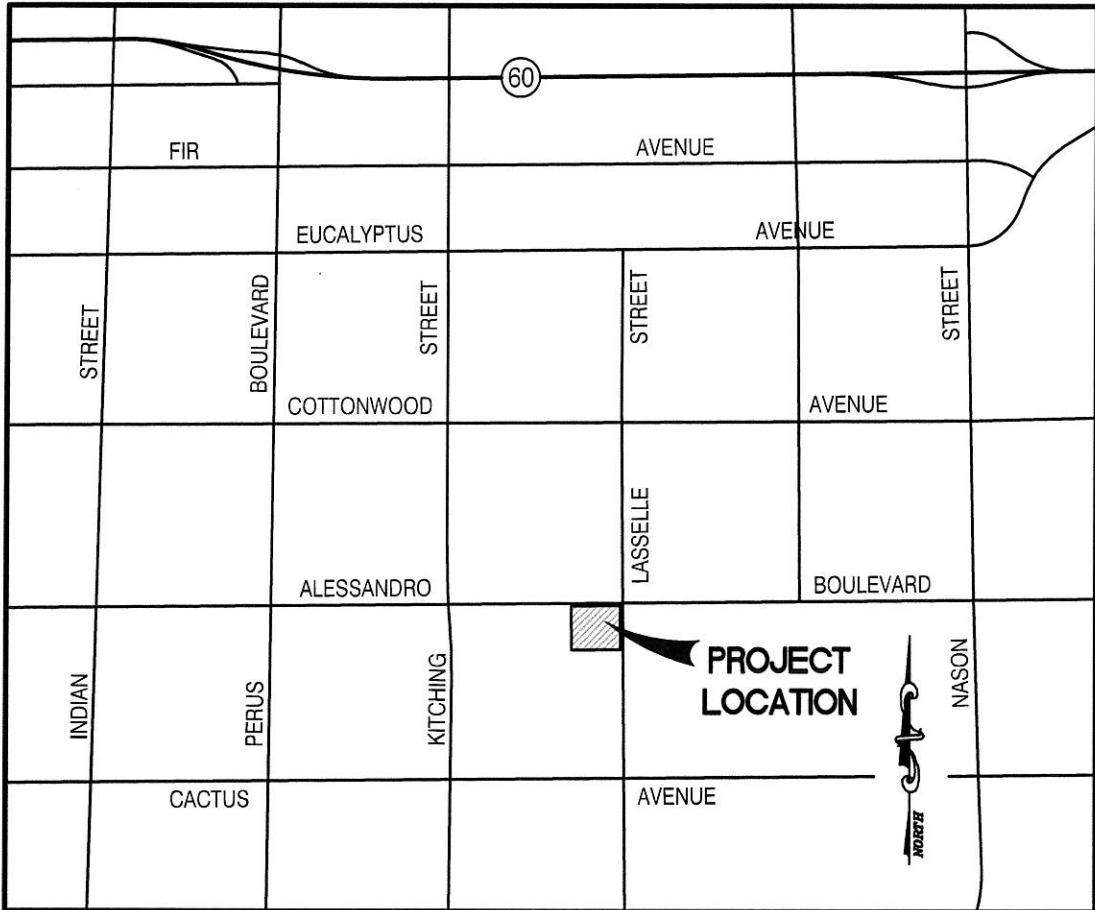

1. Standard Intensity-Duration Curves Data for Elsinore-Wildomar (Plate D-4.1, sheet 6 of 6)
2. Hydrologic Soils Group Map for SunnyMead
3. Point Precipitation Frequency, NOAA Atlas 14, Vol. 6, Ver. 2

**Appendix F:** Reference Off-site Storm Drain Plans

1. Lasselle Street Storm Drain Plans – Project No. 06-50182725

**Appendix G:** Pocket Map Exhibits

1. Plate 1 –Hydrology Map - Undeveloped Condition
2. Plate 2 – Hydrology Map - Developed Condition

## VICINITY MAP

N.T.S.

## **PURPOSE**

The purpose of this report is to provide hydrologic and hydraulic calculations to support the conceptual design for the storm drain system proposed for Crystal Cove.

## **EXISTING CONDITIONS**

The project site consists of 7.9 acres located in the City of Moreno Valley, County of Riverside, California. The project is located at the southwest corner of the intersection of Alessandro Boulevard and Lasselle Street. The surrounding area consists of vacant land, single family residential, and light commercial properties.

The site is currently vacant, naturally drains in a southwesterly direction. All the surface runoff from the project site ultimately drains into the existing street. The site consist of open brush and natural poor cover. The entire project site consists of soil type B.

The project site can be found on Flood Insurance Rate Map (FIRM) No. 06065C0765G, effective on August 28, 2008, Zone X.

## **PROPOSED CONDITIONS**

The project site proposes 200 units apartment, associated infrastructure. On site runoff will be conveyed through private street improvements. The storm drain pipe will convey the storm runoff to the proposed underground chambers to be detained. Runoff Q<sub>100</sub>=3.0 cfs exits the underground basin through the use of a pump to a storm drain manhole. From here it drains to the existing 36" storm drain underneath Laselle Street (Project No. 06-50182725), then into Sunnymead MDP Line N-2.

The onsite drainage system shall be designed to ensure that runoff from a 100-year storm of 24 hours duration under developed condition is equal or less than the runoff under existing conditions of the same storm frequency. 24-hour storm duration shall be analyzed to determine the detention.

## **HYDROLOGY**

Hydrologic calculations within this report have been prepared using 2016 Advance Engineering Software's (AES) Rational Method software for Riverside County. Hydrologic variables include "B" soil type. Rainfall intensities as follows: 10 yr - 10 min. = 2.01, 10 yr – 60 min. = 0.82, 100 yr – 10 min. = 2.94, 100 yr – 60 min. = 1.20. Calculations have been prepared for both the 10 and 100 year events.

The software used in running the synthetic unit hydrograph for determination of flood volume, is a program by Civil Design Corporation. Parameters for the hydrograph calculations are specified in the Riverside County Flood Control and Water Conservation Hydrology Manual. The Point Precipitations used are based on data from NOAA Atlas 14, Volume 6, and Version 2, a copy of which is found in Appendix E.

## **CONCLUSIONS**

This drainage report includes the post-development hydrology analyses for the 10 and 100-Yr. storm events. Base on this drainage study, we conclude that the proposed storm drain system provides adequate capacity to convey flows for the 100-Yr. storm.

### Comparative runoff, Pre & Post Development

Runoff	Rational Method	
	Pre Development	Post Development
$Q_{10}$ (cfs)	<b>7.4</b>	<b>11.6</b>
$Q_{100}$ (cfs)	<b>12.4</b>	<b>17.0</b>

Drainage Area = 8.02(Ac.) = 0.013 Sq. Mi.  
Drainage Area for Depth-Area Areal Adjustment = 8.02(Ac.) =  
0.013 Sq. Mi.

USER Entry of lag time in hours  
Lag time = 0.205 Hr.  
Lag time = 12.30 Min.  
25% of lag time = 3.07 Min.  
40% of lag time = 4.92 Min.  
Unit time = 5.00 Min.  
Duration of storm = 24 Hour(s)  
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
8.02	1.96	15.72

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
8.02	4.83	38.74

1Post9260024100

STORM EVENT (YEAR) = 100.00  
Area Averaged 2-Year Rainfall = 1.960(In)  
Area Averaged 100-Year Rainfall = 4.830(In)

Point rain (area averaged) = 4.830(In)  
Areal adjustment factor = 100.00 %  
Adjusted average point rain = 4.830(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
2.640	56.00	0.100
5.380	56.00	1.000
Total Area Entered =	8.02(Ac.)	

RI	RI	Infil. Rate	Impervious	Adj. Infil. Rate	Area%	F
AMC2	AMC-3	(In/Hr)	(Dec.%)	(In/Hr)	(Dec.)	(In/Hr)
56.0	74.8	0.305	0.100	0.278	0.329	0.091
56.0	74.8	0.305	1.000	0.031	0.671	0.020
				Sum (F) =	0.112	

Area averaged mean soil loss (F) (In/Hr) = 0.112  
Minimum soil loss rate ((In/Hr)) = 0.056  
(for 24 hour storm duration)  
Soil low loss rate (decimal) = 0.340

WSE for Q100 = 7.02 ft

Note:

1. Pre developed Peak flow for 100% of Project site Q 100 yr 24hr = 3.1650 cfs
2. Post developed Peak flow Q 100 yr 24-hr = 4.326 cfs
3. Constant Pump Rate = 3.0 cfs
4. WSE for Q 100 is 7.02 ft.
5. Drawdown time is 25.66 hours

<sup>1</sup> Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

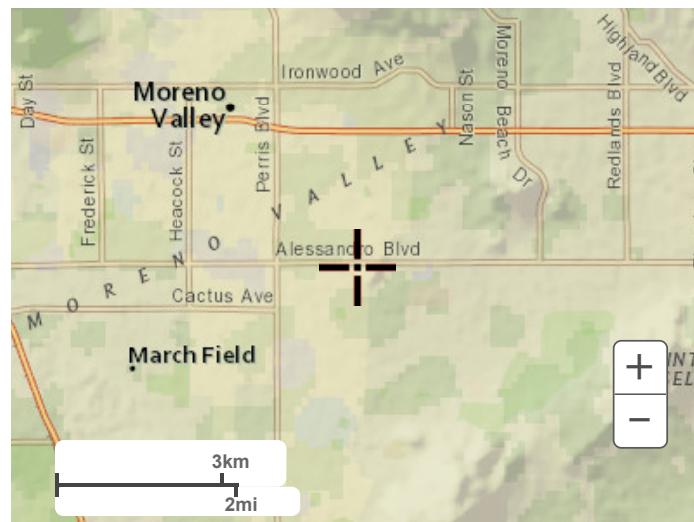

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.
