## AIR QUALITY AND GREENHOUSE GAS ASSESSMENT

### PROPOSED VILLAGE AT MORENO VALLEY – PHASE I NWC NASON STREET AND FIR AVENUE MORENO VALLEY, CALIFORNIA

#### 1.0 INTRODUCTON

This report presents an assessment of potential air quality and greenhouse gas (GHG) impacts associated with the proposed retail project to be constructed at the NWC of Nason & Fir Street, Moreno Valley, California (subject property). At this time the following improvements are planned:

Site Development is 9.3 acres to be final graded and will include:

- Retail “A” – 3,000 sf
- Retail “B” – 3,500 sf
- Retail “C” – 4,500 sf
- Food “A” – 3,000 sf
- Food “B” – 3,000 sf
- Food “C” – 1,500 sf
- Food “D” – 2,500 sf
- Retail Anchor “A” – 16,000 sf
- Retail Anchor “B” – 6,000 sf
- Fast Food – 4,456 sf
- Restaurant – 4,500 sf
- Convenience Store/18 fuel pumps
- Car Wash – 1,600 sf
- Parking Lot – 439 spaces

GHG impacts will be attributable to emissions associated with construction and operational emissions including traffic and energy use. This report presents an evaluation of existing conditions at the subject property, thresholds of significance, and potential air quality and GHG impacts associated with construction and operation of the project.

#### 2.0 EXISTING CONDITIONS

##### 2.1 Current Development

The subject property is currently vacant land and residential development with a single-family home. Offsite and onsite improvements exist however new improvement will be constructed to allow for vehicle and pedestrian access to the new site development.

##### 2.2 Regulatory Setting

The United States Environmental Protection Agency (EPA) defines air quality by ambient air concentrations of specific pollutants that have been shown to be of concern with respect to health and welfare of the general public. The EPA is responsible for enforcing the Federal Clean Air Act (CAA) of

1970 and its 1977 and 1990 Amendments. The CAA required the EPA to establish National Ambient Air Quality Standards (NAAQS), which identify concentrations of pollutants in the ambient air below which no adverse effects on the public health and welfare are anticipated.

In response, the EPA established both primary and secondary standards for several pollutants (called “criteria” pollutants). Primary standards are designed to protect human health with an adequate margin of safety. Secondary standards are designed to protect property and the public welfare from air pollutants in the atmosphere.

The Federal CAA allows states to adopt ambient air quality standards and other regulations provided they are at least as stringent as federal standards. More stringent California Ambient Air Quality Standards (CAAQS) have been adapted by the California Air Resources Board (ARB) for the six criteria pollutants through the California Clean Air Act of 1988 (CCAA). The CCAA also established California Ambient Air Quality Standards (CAAQS) for additional pollutants, including sulfates, hydrogen sulfide, vinyl chloride and visibility-reducing particles (see Table 1 for NAAQS and CAAQS.)

Areas that do not meet the NAAQS or the CAAQS for a particular pollutant are considered to be “Nonattainment Areas” for that pollutant. In September 1997, the EPA promulgated 8-hour O<sub>3</sub> and 24-hour and annual PM<sub>2.5</sub> national standards. As a result, this action has initiated a new planning process to monitor and evaluate emission control measures for these pollutants.

The South Coast Air Basin (SCAB) is classified as an Extreme Nonattainment Area for the NAAQS for O<sub>3</sub> for all Averaging Times and a Nonattainment Area for the NAAQS PM<sub>2.5</sub> for all Averaging times. The SCAB is also designated as a Maintenance Area for the NAAQS for CO and NO<sub>2</sub>. The SCAB is also considered a Serious Nonattainment Area for the CAAQS pollutant PM<sub>10</sub>. The area is considered unclassified or Attainment for all other NAAQS and CAAQS for the other criteria pollutants.

The California ARB is the state regulatory agency with authority to enforce regulations to both achieve and maintain the NAAQS and CAAQS. The ARB is responsible for the development, adoption, and enforcement of the state’s motor vehicle emissions program, as well as the adoption of the CAAQS. The ARB also reviews operations and programs of the local air districts and requires each air district with jurisdiction over a nonattainment area to develop its own strategy for achieving the NAAQS and CAAQS.

The local air district has the primary responsibility for the development and implementation of rules and regulations designed to attain the NAAQS and CAAQS, as well as the permitting of new or modified sources, development of air quality management plans, and adoption and enforcement of air pollution regulations. The South Coast Air Quality Management District (SCAQMD) is the local agency responsible for the administration and enforcement of air quality regulations for the SCAB.

The SCAQMD and the Southern California Association of Governments (SCAG) are responsible for developing and implementing the clean air plan for attainment and maintenance of the ambient air quality standards in the SCAB. The most recently adopted air quality plan in the SCAB is the 2016 Air Quality Management Plan (AQMP), which was adopted by the Board in March 2017.

Table 1 presents a summary of the ambient air quality standards adopted by the federal and California Clean Air Acts.

**TABLE 1**  
**Ambient Air Quality Standards**

POLLUTANT	AVERAGE TIME	CALIFORNIA STANDARDS CONCENTRATION	CALIFORNIA STANDARDS METHODS	NATIONAL STANDARDS PRIMARY	NATIONAL STANDARDS SECONDARY	NATIONAL STANDARDS METHOD	
Ozone (O <sub>3</sub> )	1 hour	0.09 ppm (180 µg/m <sup>3</sup> )	Ultraviolet Photometry			Ultraviolet Photometry	
	8 hour	0.070 ppm (137 µg/m <sup>3</sup> )		0.070 ppm (137 µg/m <sup>3</sup> )	0.070 ppm (137 µg/m <sup>3</sup> )		
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m <sup>3</sup> )	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 µg/m <sup>3</sup> )	—	Non-Dispersive Infrared Spectroscopy (NDIR)	
	8 Hour	9.0 ppm (10 mg/m <sup>3</sup> )		9 ppm (10 µg/m <sup>3</sup> )	—		
Nitrogen Dioxide (NO <sub>2</sub> )	Annual	0.030 ppm (56 µg/m <sup>3</sup> )	Gas Phase Chemiluminescence	0.053 ppm (100 µg/m <sup>3</sup> )	0.053 ppm (100 µg/m <sup>3</sup> )	Gas Phase Chemiluminescence

ppm= parts per million; µg/m<sup>3</sup> = micrograms per cubic meter; mg/m<sup>3</sup>= milligrams per cubic meter Source: California Air Resources Board, [www.arb.ca.gov](http://www.arb.ca.gov), 2016

### 3.0 THRESHOLDS OF SIGNIFICANCE

The SCAQMD has adopted CEQA significance thresholds as of 2015 (SCAQMD 2015), which provide guidance on the requirements for evaluating potential air quality impacts and on thresholds of significance under CEQA. The SCAQMD has identified numerical emission thresholds for significance for construction and operation for a project. The project-level numerical thresholds are summarized in Table 2.

**TABLE 2**  
**SCAQMD Significance Thresholds**

POLLUTANT	CONSTRUCTION	OPERATION
<i>Criteria Pollutants Mass Daily Thresholds</i>		
NO <sub>x</sub>	100 lbs/day	55 lbs/day
ROG (VOC)	75 lbs/day	55 lbs/day
PM <sub>10</sub>	150 lbs/day	150 lbs/day
PM <sub>2.5</sub>	55 lbs/day	55 lbs/day
SO <sub>x</sub>	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Lead	3 lbs/day	3 lbs/day
<i>TAC, AHM, and Odor Thresholds</i>		
Toxic Air Contaminants (TACs)	Maximum Incremental Cancer Risk ≥ 10 in 1 million Cancer Burden > 0.5 (in areas ≥ 1 in a million) Chronic and Acute Hazard Index ≥ 1.0 (project increment)	
Odor	Project creates an odor nuisance pursuant to SCAQMD Rule 402	
GHG	10,000 MT/yr CO <sub>2</sub> eq for industrial facilities	
<i>Ambient Air Quality for Criteria Pollutants</i>		
NO <sub>2</sub> 1-hour average Annual arithmetic mean	SCAQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards 0.18 ppm (state) 0.03 ppm (state) and 0.0534 ppm (federal)	
PM <sub>10</sub> 24-hour average Annual geometric mean	10.4 µg/m <sup>3</sup> construction & 2.5 µg/m <sup>3</sup> operation 1.0 µg/m <sup>3</sup>	
PM <sub>2.5</sub> 24-hour average	10.4 µg/m <sup>3</sup> construction & 2.5 µg/m <sup>3</sup> operation	
SO <sub>2</sub> 1-hour average 24-hour average	0.25 ppm (state) & 0.075 ppm (federal – 99 <sup>th</sup> percentile) 0.04 ppm (state)	
Sulfate 24-hour average	25 µg/m <sup>3</sup> (state)	
CO 1-hour average 8-hour average	SCAQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards 20 ppm (state) and 35 ppm (federal) 9.0 ppm (state/federal)	
Lead 30-day average Rolling 3-month average Quarterly average	1.5 µg/m <sup>3</sup> (state) 0.15 µg/m <sup>3</sup> (federal) 1.5 µg/m <sup>3</sup> (federal)	

µg/m<sup>3</sup> = microgram per cubic meter; ppm = parts per million; MT = Metric Ton

To further evaluate the potential for significant impacts associated with the project, the SCAQMD's *Final Localized Significance Threshold Methodology* (SCAQMD 2008) can be considered to evaluate whether a project's emissions could cause a localized exceedance of an ambient air quality standard.

The Localized Significance Threshold (LST) Methodology provides a look-up table for construction and operational emissions based on the emission rate, location, and distance from receptors, and provides a methodology for air dispersion modeling to evaluate whether a construction or operation could cause an exceedance of an ambient air quality standard. The LST lookup tables (SCAQMD 2009) are applicable only to sources that are five acres or less in size. Because this development is planned for a total of 9.3 acres, LST thresholds do not apply as they are for projects of 5 acres or less.

## 4.0 IMPACTS

The proposed retail Development improvements to be constructed include both construction and operational impacts. Construction impacts include emissions associated with site grading/preparation, utilities installation, construction of a building, and paving. Operational impacts include emissions associated with the project, including traffic, at full build-out. Construction is summarized in Table 4 below.

**Table 4**  
**Construction Summary for Project Site**

Area Disturbed	Construction Summary	Parking Spaces	Approximate Duration
22,000 sf	Regional Shopping Center	-	12 Months
4,456 sf	Fast Food Restaurant w/ Drive Through	-	12 Months
18 pumps	Convenience Market w/ Gas Pumps	-	12 Months
1,600	Car Wash	-	12 Months
11,000 sf	Strip Mall Retail	-	12 Months
9,000 sf	Fast Food Restaurants w/o Drive Through	-	12 Months
4,500	High Turnover (Sit Down Restaurant)	-	12 Months
-	Parking Lot	405	5 Months

### 4.1 Construction

Emissions of pollutants such as fugitive dust that are generated during construction are generally highest near the construction site. Emissions from the construction phase of the project were estimated through the use of the CalEEMod Model (ENVIRON 2016). It was assumed that heavy construction equipment would be operating at the site for eight hours per day, five days per week during project construction. In addition, it was assumed that, in accordance with the requirements of the SCAQMD Rule 403, fugitive dust controls would be utilized during construction, including watering of active sites three times daily.

For the purpose of estimating emissions from the application of architectural coatings, it was assumed that water-based coatings that would be compliant with SCAQMD Regulations would be used for both exterior and interior surfaces. Within the CalEEMod Model, this assumption was included by assigning all architectural coating a low VOC content.

Tables 5 and 6 provide summaries of the emission estimates for construction and operation of all proposed site improvements. These projected emissions assume standard measures are implemented to reduce emissions, as calculated with the CalEEMod Model, and are compared to the regional thresholds. Refer to Appendix B for detailed model output files.

Table 5 includes projected emissions for all steps of construction, averaged over the project's projected construction duration. These steps include: Grading Site, Site Preparation, Building Construction, Paving, and Architectural Coatings. Note that projected emissions for all pollutants during construction are below both the SCAQMD's Air Quality Significance Thresholds.

During Construction diesel-fired equipment will be operated and will result in the release of diesel particulate matter which is a listed carcinogen and toxic air contaminant in the State of California. The earthwork phase is the phase of construction in which the majority of diesel-fired equipment will be used. Because this duration is relatively short it is expected that the release of diesel will not have a negative impact to surrounding receptors.

Construction of the project would be short-term and temporary. Thus, the emissions associated with construction would not result in a significant impact on the ambient air quality. Because emissions are less than the significance levels, they would not conflict or obstruct the implementation of the AQMP or applicable portions of the SIP. Project construction would also not result in emission of any odor compounds that would cause a nuisance or significant impact to nearby receptors. The impacts associated with Project construction are therefore not considered significant.

Project construction would also not result in emission of any odor compounds that would cause a nuisance or significant impact to nearby receptors. The impacts associated with Project construction are therefore not considered significant.

Construction of the project would be short-term and temporary, therefore a cumulatively increase in the surrounding emissions associated with the area would not result in a significant impact on the ambient air quality. In addition, because emissions are less than the significance levels, they do not expose sensitive receptors to substantial pollutant concentrations.

Based on the above project analyst of the construction phase, the project construction phase will not conflict or obstruct the implementation of the AQMP or applicable portions of the SIP.

**TABLE 5**  
**Estimated Construction Emissions**  
**Annual LBS/Day (unless otherwise shown)**

EMISSION SOURCE	ROG	NOx	CO	SO <sub>x</sub>	PM10	PM2.5
<b>Regional Significance Criteria</b>	75	100	550	150	150	55
<b>Project Construction Emissions</b>						
Retail Development Summer Peak	28.23	33.12	21.17	0.04	21.47	11.64
Retail Development Winter Peak	28.24	33.13	21.11	0.04	21.47	11.64
<b>Significant?</b>	No	No	No	No	No	No

#### 4.2 Operational Impacts

The main operational impacts associated with the Project would be impacts associated with traffic. Minor impacts would be associated with energy use and area sources.

To address whether the Project would result in emissions that would violate any air quality standard or contribute substantially to an existing or proposed air quality violation, the emissions associated with Project-generated traffic and area sources were compared with the SCAQMD's quantitative significance criteria. Default trip generation rates in the CalEEMod Model were used to estimate emissions from vehicles traveling to and from the project development. The CalEEMod Model contains emission factors from the EMFAC2016 model, which is the latest version of the Caltrans emission factor model for on-road traffic. Project-related traffic was assumed to be comprised of a mixture of vehicles in accordance with the CalEEMod Model default outputs for traffic. This assumption includes light duty autos and light duty trucks (i.e., small trucks, SUVs, and vans) as well as medium- and heavy-duty vehicles that may be traveling to the facility to make deliveries. For conservative purposes, emission factors representing

the vehicle mix for 2019 were used to estimate emissions as 2019 was assumed to be the first year of full operation; based on the results of the EMFAC2016 model for subsequent years, emissions would decrease on an annual basis from 2019 onward due to phase-out of higher polluting vehicles and implementation of more stringent emission standards that are taken into account in the EMFAC2016 model. Emissions associated with area sources (energy use and landscaping activities) were also estimated using the default assumptions in the CalEEMod Model.

Table 6 below presents the results of the CalEEMod emission calculations in lbs/day for operations, as an annual average considering the project's design features, along with a comparison with the SCAQMD Air Quality Significance Thresholds for Operations. The calculation assumed that the project would be constructed to current Title 24 buildings standards and would use low flow plumbing fixtures.

**TABLE 6**  
**Estimated Operational Emissions, LBS/Day (unless otherwise shown)**

EMISSION SOURCE	ROG	NOX	CO	SO <sub>X</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>
<b>Significance Criteria, Operations</b>	55	55	550	150	150	55
<b>Project Construction Emissions</b>						
Retail Development Summer Peak	37.10	29.55	250.07	0.47	46.29	12.65
Retail Development Winter Peak	35.19	31.67	251.65	0.45	46.29	12.65
<i>Significant?</i>	<i>No</i>	<i>Yes</i>	<i>No</i>	<i>No</i>	<i>No</i>	<i>No</i>

Based on the estimates of the emissions associated with project operations, the emissions are below the significance criteria with the exception of NOx. It should be noted that the emissions from vehicles are projected to decrease with time due to phase-out of older, more polluting vehicles and increasingly stringent emissions standards.

Projects involving traffic impacts may result in the formation of locally high concentrations of CO, known as CO "hot spots." It is not anticipated that the project would have a significant impact on traffic in the area, and no intersections would degrade to unacceptable levels. The intersections in the project area would therefore operate at an acceptable LOS and would not experience CO "hot spots" because traffic congestion would not result.

In reviewing the project data, location and area a cumulatively increase in the surrounding emissions associated with the area would not result in a significant impact on the ambient air quality. In addition because emissions are less than the significance levels they do not expose sensitive receptors to substantial pollutant concentrations.

Based on the above project analyst of the operational phase, the project could conflict or obstruct the implementation of the AQMP or applicable portions of the SIP.

#### 4.3 Odors

During construction, diesel equipment operating at the site may generate some nuisance odors; however, due to the distance of sensitive receptors to the project site and the temporary nature of construction, odors associated with project construction would not be significant.

Land uses associated with odor complaints include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting activities, refineries, landfills, dairies, and fiberglass molding operations. These land uses are not proposed for the retail project in Moreno Valley, CA. Odor impacts would not be significant.

---

## 5.0 GREENHOUSE GAS EVALUATION

According to the California Natural Resources Agency, “due to the global nature of GHG emissions and their potential effects, GHG emissions will typically be addressed in a cumulative impacts analysis.” According to Appendix G of the CEQA Guidelines, the following criteria may be considered to establish the significance of GHG emissions:

Would the project:

- Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?
- Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

As discussed in Section 15064.4 of the CEQA Guidelines, the determination of the significance of greenhouse gas emissions calls for a careful judgment by the lead agency, consistent with the provisions in Section 15064. Section 15064.4 further provides that a lead agency should make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate the amount of GHG emissions resulting from a project. A lead agency shall have discretion to determine, in the context of a particular project, whether to:

- Use a model or methodology to quantify greenhouse gas emissions resulting from a project, and which model or methodology to use. The lead agency has discretion to select the model or methodology it considers most appropriate provided it supports its decision with substantial evidence. The lead agency should explain the limitations of the particular model or methodology selected for use; and/or
- Rely on a qualitative analysis or performance-based standards.

Section 15064.4 also advises a lead agency to consider the following factors, among others, when assessing the significance of impacts from greenhouse gas emissions on the environment:

1. The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting;
2. Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project; and
3. The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions.

On December 5, 2008, the SCAQMD Governing Board adopted the staff proposal for an interim GHG significance threshold for projects where the SCAQMD is lead agency. On September 28, 2010, the SCAQMD has recommended a threshold of 3,000 metric tons of CO<sub>2</sub>e (carbon dioxide equivalent) as a Tier 3 threshold for all residential and commercial land uses under CEQA. For the purpose of this evaluation, a threshold of 3,000 metric tons of CO<sub>2</sub>e is used to assess significance of greenhouse gas emissions.

On December 8, 2015, Riverside County adopted their General Plan with includes the Climate Action Plan (CAP). This plan contains guidance for Riverside County’s Greenhouse Gas. This plan provides equivalent threshold of 3,000 MT CO<sub>2</sub>e and imposes mitigation checklist for those projects exceeding the threshold.

The proposed project would generate an estimated total of 490.73 metric tons of CO<sub>2</sub>e emissions during construction. The SCAQMD recommends amortizing construction emissions over a period of 30 years

---

to estimate the contribution of construction emissions to operational emissions over the project lifetime. Amortized over 30 years, the construction of the project will generate approximately 16.36 metric tons of CO<sub>2</sub>e on an annualized basis.

Based on the results of the CalEEMod Model, the project would generate a total of 6,340.78 metric tons of CO<sub>2</sub>e emissions annually from operations. By adding the amortized construction emissions results with the operational annual CO<sub>2</sub>e emissions the project will produce 6,357.14 metric tons over a 30-year period. This cumulative level is above the SCAQMD's recommended Tier 3 threshold of 3,000 metric tons of CO<sub>2</sub>e emissions for residential and commercial land uses, although the district has not officially adopted this or any other number. In addition, the project would be in compliance with the City's Climate Action Plan as the land use and zoning for the project are consistent with the proposed use. Therefore, the project site's eventual use as proposed was considered when the Climate Action Plan projections were calculated, and the development would thus be consistent with the Climate Action Plan's reduction goals. Under the California Environmental Quality Act (CEQA) a project would not have significant greenhouse gas emissions if it is in compliance with a locally adopted Climate Action Plan.

## 6.0 CONCLUSIONS

The air quality and GHG analysis for the proposed project in Moreno Valley, CA evaluated emissions associated with both the construction and operation of the project. Emissions associated with construction and operation were compared with significance thresholds developed by the SCAQMD, which provide a conservative means of evaluating whether project emissions would cause a significant impact on the ambient air quality or whether further evaluation is warranted. Emissions associated with construction and operation are below the significance thresholds for all phases and pollutants. Thus, the emissions associated with construction and operation of the project would not result in a significant impact.

## CONSTRUCTION NOTES

- 1.10 6" CONCRETE CURB
- 1.20 20'H LED AREA LIGHT WITH PHOTO-CELL AND TIME CLOCK SWITCHING PER "CALGREEN" AND TITLE 24 REQUIREMENTS. HOOD AND ARRANGE SO AS NOT TO CAUSE A NUISANCE TO ADJACENT STREET TRAFFIC OR TO LIVING ENVIRONMENT. THE AMOUNT OF LIGHT THAT SHALL BE PROVIDED DSHALL BE PER THE PUBLIC WORKS STANDARDS AND CALGREEN
- 1.30 LANDSCAPING WITH AUTOMATIC IRRIGATION
- 1.40 6" CONCRETE DRIVE SLAB WITH #3 BARS @ 18" O.C. OR AS SPECIFIED IN SOILS REPORT IF AVAILABLE.
- 1.45 COLORED CONCRETE WITH 8X8 SCORE LINES
- 1.50 6" OVER 4" A.B. ASPHALT PAVING OR AS SPECIFIED IN SOILS REPORT IF AVAILABLE.
- 1.60 HANDICAP PATH OF TRAVEL (MIN. 48" WIDE AND SLOPE NOT TO EXCEED 2% EACH WAY)
- 1.70 HANDICAP PARKING SPACE WITH ALL RELATED SIGNAGE (SLOPE NOT TO EXCEED 2% E.W.)
- 1.75 BICYCLE PARKING PER CAL GREEN CODE
- 1.80 9'x18" STANDARD PARKING SPACES
- 1.90 CONCRETE HANDICAP RAMP (SLOPE 8.33%)
- 1.91 CONCRETE SIDEWALK (MIN. 48" WIDE WITH 2% CROSS SLOPE WHERE HANDICAP PATH OF TRAVEL OCCURS)
- 2.10 TRASH ENCLOSURE PER CITY OF MORENO VALLEY PUBLIC WORKS
- 2.20 STAINLESS STEEL FILLED STEEL GUARD POSTS
- 2.21 U-SHAPE STEEL GUARD POSTS
- 2.30 AIR/WATER AND VACUUM UNIT
- 2.35 ELECTRIC CHARGING STATION
- 2.40 UNDER GROUND STORAGE TANKS (2) 20,000 GALLON AND (1) 30,000 GALLON UNDER REINFORCED CONCRETE SLAB
- 2.41 TANK VENT RISERS CARBON CANISTER
- 2.45 3,000 GALLON CAR WASH CLARIFIER
- 2.50 CONCRETE ISLAND W/ (1) MULTI PRODUCT DISPENSER (6" MIN. & 8" MAX. HEIGHT)
- 2.70 FUELING CANOPY
- 2.71 FUELING CANOPY COLUMNS
- 2.80 ID SIGNAGE
- 2.85 36'H STUCCO FINISH SCREEN WALL
- 2.90 ELECTRICAL PANELS
- 3.10 ADA PARKING LOT ENTRY SIGN PER CHAPTER 11B OF CBC
- 10.10 CONCRETE DRIVEWAY PER CITY OF MORENO VALLEY PUBLIC WORKS STANDARD
- 10.20 CONCRETE SIDEWALK PER CITY OF MORENO VALLEY PUBLIC WORKS STANDARD

## SITE PLAN & PARKING SUMMARY

BUILDING NO.	SIZE	USE	RATIO	REQUIRED	PROVIDED
